

Description of this intensive course:

# Professional typing

Achieve touch-typing in only a few hours

## Content

Participants receive access to the writing trainer at **fingerLINK® online** for 180 days and can decide freely whether they would like to invest one day for this seminar or take their time.

After just a few hours, the participants will have mastered touch-typing without having to look at the keyboard. All letters from A to Z are taught as well as punctuation marks, upper and lower case letters, and the numbers in the row above the letters. The symbols of the left and right hand can also be learned in two additional lessons.

A free trial lesson is available at [www.fingerlink.com](http://www.fingerlink.com).

## Method of learning

The participants learn to link each key with a simple image based on ancient Greek mnemonics. These images are then combined into a total of 10 simple and memorable stories. Within a very short time, each finger masters its own short story, and by doing so, also the correct key assignment which from now on remains deeply anchored in your long-term memory.

The visualization stories later sink more and more into oblivion as soon as touch-typing has become deeply engrained into your mind.

## Goal

At the end of this seminar, the participants will have mastered touch-typing without having to look at the keyboard. This lays the foundation, sets the pace and increases it.

After this intensive training, touch typing may work a little slower than two-fingered typing in the beginning. However, the writing speed increases enormously after a short time, and the speed of the old writing method is perceived as unusually slow.

## After the seminar

In addition to the practical implementation in everyday life, fingerLINK® online offers a variety of additional exercise transcripts with a statistical evaluation in order to practice touch-typing further thus increasing your typing speed. Lessons on individual fingers as well as quiz and game elements can be repeated as often as required.

Every participant can exchange ideas with a fingerLINK® trainer in regular and **free live online seminars (webinars)** or simply take part as a "silent" observer. In addition to practical tips and tricks for touch-typing, the webinar also provides answers to questions.

## Duration

Access to **fingerLINK® online** as self-paced learning for 180 days.

## Certificate / written confirmation

Upon request, an exam with an official certificate can be taken (ten-minute transcript with all letters, punctuation marks, upper and lower case letters as well as the numbers and symbols in the row above the letters); at least 120 keystrokes per minute with the keyboard covered).

# Professional typing

Achieve touch-typing in only a few hours

## Die Methode im Detail

fingerLINK's® holistic mental approach uses different **association and visualization techniques** in addition to the sense of touch. This proven method leads to an enormous learning acceleration, which makes the seemingly impossible possible - within only six hours.

In contrast to rote learning in the kind of "a-s-d-f – j-k-l-;" which only addresses the left brain and requires laborious practice, the fingerLINK® technique also uses the creative potential of the right brain. It reacts to images, emotions, and sounds with a hive of activity – these are qualitative characteristics that are omitted largely in most learning methods. This distribution is all the more tragic when one understands that **long-term memory** is also located in the right brain.

The fingerLINK® method for learning touch-typing addresses **both cerebral hemispheres as a team**. It creates stimuli that anchor what has been learned in our memory much more quickly and permanently than conventional learning techniques by using entertaining text-image links, sounds, and visualizations. In doing so, **mnemonics** activate the learning capability of both cerebral hemispheres equally. Such a fast learning success would otherwise not be possible within a few hours.

Participants are supported by a total of ten **visualization stories** (alpha state), **quiz** elements, **transcripts**, playful **exercises**, and **BrainGym** elements, and at the end of the seminar, they are able to write "blindly" - **without having to look at the keyboard**. The fingerLINK® seminar creates the basis to be able to write safely and quickly with touch-typing within a very short period by consistently applying what has already been learned.
